COMICCRAFT — BRAINSTORMING & IDEA PRIORITIZATION

==========

1. PROBLEM IDENTIFIED

Creating comic books traditionally requires two expensive skill sets: professional writing ability and artistic illustration skills. Aspiring storytellers, hobbyists, and content creators cannot produce comics without either learning these skills or paying artists. There is no easy, free, and fast way to transform a story idea into a visual comic.

2. IDEAS GENERATED

Idea A: A comic template library with pre-drawn panels (no AI, no originality)

Idea B: A marketplace connecting writers with artists (requires coordination)

Idea C: An AI-powered comic generator using text + image AI (SELECTED)

Idea D: A mobile app for reading comics (consumes, does not generate)

3. PRIORITIZATION MATRIX

Idea	Feasibility	Impact	Innovation	Cost	Total	
A	8/10	4/10	2/10	10/10	24	
B	5/10	6/10	4/10	6/10	21	
C	9/10	9/10	9/10	10/10	37	← SELECTED
D	7/10	4/10	3/10	9/10	23	

4. FINAL SELECTED IDEA

ComicCraft: An AI-powered comic story creator that uses Google Gemini for story outline and narration, and Pollinations.ai for comic-style image generation. The application produces a complete 5-panel comic that users can download as a PDF.
