COMICCRAFT — PROBLEM STATEMENT

==========

PRIMARY PROBLEM

Aspiring storytellers, students, hobbyists, and small content creators
cannot produce comic books because traditional comic creation requires
two rare and expensive skills: professional writing and illustration.
Hiring an artist for a 5-page comic costs Rs. 5,000–Rs. 20,000.

SECONDARY PROBLEMS

- AI image generation tools are complex to use and require API keys
- Existing tools generate either text or images but not a complete comic
- No free solution combines story, dialogue, and illustrations into one output
- Non-artists have no way to visualize their ideas as sequential art

TARGET USERS

- Students working on creative writing projects
- Hobbyist storytellers and aspiring comic creators
- Content creators and social media influencers
- Teachers creating educational comics for students
- Anyone with a story idea but no drawing skills

SUCCESS CRITERIA

- User can generate a complete 5-panel comic in under 2 minutes
- Each panel has a title, an AI-generated illustration, and narration
- Story has coherent flow from panel 1 through panel 5

- Comic is exportable as a downloadable PDF

- Zero cost to the end user
