COMICCRAFT — PROJECT EXECUTABLE FILES

==========

All project files are available at:

https://github.com/luci/ComicCraft

FILE LISTING

Root files:

- .env (Gemini API key — NOT in GitHub)
- .gitignore
- requirements.txt
- README.md

Application code (app/):

- app/__init__.py
- app/main.py (routes and orchestration)
- app/gemini_outline.py (5-panel outline generator)
- app/gemini_story.py (narration generator)
- app/image_generator.py (Pollinations image generator)

Templates (templates/):

- templates/index.html
- templates/comic_preview.html

Static assets (static/):

- static/style.css

- static/panels/ (auto-created, stores generated images)

HOW TO RUN

1. Clone:

  git clone https://github.com/luci/ComicCraft.git

  cd ComicCraft

2. Create virtual environment:

  python -m venv venv

  venv\Scripts\activate

3. Install:

  python -m pip install -r requirements.txt

4. Create .env with:

  GOOGLE_API_KEY=AIzaSyYourActualKeyHere

5. Run:

  python -m uvicorn app.main:app --reload

6. Open in browser:

  http://127.0.0.1:8000

FILE SIZE SUMMARY

- Total source code: under 15 KB
- requirements.txt: under 100 bytes
- No bundled binaries
